Getting set up

Google Colab (Week 1) and Anaconda + JupyterLab (Week 4)

You need

A laptop (Windows or macOS) · a Google account · about 5 GB free disk space by Week 4.

Part 1 · Google Colab (before Week 1)

1. Go to **colab.research.google.com** and sign in with your Google account.
2. Download the Week 1 demo notebook (.ipynb) from Moodle.
3. In Colab choose **File → Upload notebook** and select the file.
4. Click a code cell and press **Shift + Enter** to run it.
5. Choose **File → Save a copy in Drive** so your work is kept.

For heavier AI work later in the term, choose **Runtime → Change runtime type → GPU**.

Part 2 · Anaconda and JupyterLab (Week 4)

1. Download the free **Anaconda Distribution** installer for your computer from **anaconda.com** and run it with the default options.
2. Open **Anaconda Navigator** and click **Launch** under JupyterLab (or type jupyter lab in the Anaconda Prompt or Terminal).
3. In JupyterLab, use the file browser on the left to open the same .ipynb notebooks you used in Colab.
4. Extra libraries are installed in class in Week 4 — you do not need to install anything else now.

If something goes wrong

- Restart: **Runtime → Restart** (Colab) or **Kernel → Restart** (Jupyter), then run cells from the top.
- Read the **last line** of any red error message first.
- Post the error message and what you tried in the **Q&A forum**, or bring it to the code clinic.
